

Pioneer Oshkosh's E-Coat process is set-up to handle the bulk of your finishing requirements. Our zinc phosphate pre-treatment process has the ability to handle multiple base metals and is ideal for the highest level of corrosion protection.

Pioneer's E-Coat process provides the most comprehensive coverage, especially around tough edges. Our E-Coat process produces a medium gloss black finish and can be utilized either as a sole finish, or as a primer before a liquid or powder topcoat application. E-Coat is your best choice for corrosion protection.

- Pioneer Oshkosh's Black Cationic Epoxy E-Coat provides excellent corrosion protection with exceptional edge coverage, especially on sharp edges.
- System Pre-treatment meets military TT-C-490E.
- Pretreatment and E-Coat is RoHs Compliant.
- Meets MIL-DTL-53084 as a primer for military CARC (Chemical Agent Resistant Coatings).
- Pioneer also offers Wet Paint and Powder Coat, which can be utilized as topcoat applications over an E-Coat primer.
- Ability to serve multiple commercial components, including, but not limited to:
  - Automotive Parts & Accessories
  - Compressors
  - Fasteners
  - Computer Parts
  - Heavy Duty Trucks
  - Agriculture & Construction
  - Marine Engines
  - Switchgear
  - Transformers
